Abstract. The adoption of various digital marketing strategies has grown with the advent of new technologies and the awareness of its ever-increasing power. Today, digital marketing has become the most dominant marketing strategy within any company or organization, with social network marketing being the most prominent. Developing a loyal and committed customer base always starts with a good prospecting and acquisition strategy. In our review article, we'll focus on the impact of digital marketing on customer acquisition using the PRISMA method. The aim of this study is to offer a synthetic and relevant view of the use of different digital marketing strategies for customer acquisition, and to present the real impact of digital marketing on business performance today. The added value of our review article is to offer a systematic and concise analysis of the various studies that have been carried out in this direction, in order to study the impact of digital marketing on customer acquisition.

Keywords: Impact, Digital Marketing, Social Media, customer acquisition PRISMA

1 Introduction

Customer acquisition is a real challenge for any company wishing to develop its business on the market and ensure a business longevity. By implementing a variety of marketing strategies, companies aim to reach as many customers as possible. Market competition and the need to develop the skills of in-house teams are driving companies to seek out new marketing strategies to acquire more customers. Digital marketing is the most popular strategy, offering optimum results at minimum cost [1].

Today's customers are more connected and informed than ever before, and are also addicted to online shopping. Social media marketing, for example, is among the most widely adopted digital marketing strategies for acquiring new customers. Interactivity and engagement with customers on social media make the relationship with the brand more relevant and successful in terms of acquisition and also in terms of data that can be collected to improve business performance [2].

Digital marketing as a new innovative strategy allows companies to attract new customers by adopting different strategies including SEO, social media marketing, UGC, email marketing…etc.

Using digital marketing in customer acquisition has a major advantage in reducing costs and achieving results in an efficient and smoother way. Today's business will have the opportunity to grow its customer base only if it adopts a well-defined digital marketing strategy. Social media marketing is an effective strategy for interacting with the online community and building a relationship of trust and enthusiasm in order to make more sales [1].

customers by adopting different strategies including SEO, social media marketing, UGC, email marketing…etc.

Using digital marketing in customer acquisition has a major advantage in reducing costs and achieving results in an efficient and smoother way. Today's business will have the opportunity to grow its customer base only if it adopts a well-defined digital marketing strategy. Social media marketing is an effective strategy for interacting with the online community and building a relationship of trust and enthusiasm in order to make more sales [1].

Our study focuses on digital marketing and customer acquisition, we address this topic through a systematic analysis according to the PRISMA method with the aim of presenting an analysis of the studies that have focused on this topic and analyzing their different angles of our subject, therefore our research question is: What is the impact of digital marketing on customer acquisition?

2 Literature review

In today's era digital marketing is one of the most preferred marketing strategies for companies to achieve different business goals, it's an important marketing strategy that supports revenue growth. Digital marketing is considered the most effective marketing strategy when it comes to cost effectiveness, whether it's a big or small company this marketing strategy is on top priority today. It provides a big amount of data that makes progress and tracking growth easier than ever, this is one of the reasons why the transition to digital marketing is very significant. Using a digital marketing strategy today creates a strong sense of satisfaction because of the results it generates and the efficiency it delivers[1].

With the advent and development of digital marketing in the past few years, the power to acquire new customers every day has become possible, and at the lowest costs ever [1]. Digital marketing with its different strategies offers a variety of targeting and refinement options for digital communication optimized for the company's target audience and these targeting options supports getting new customers and makes the customer acquisition process more reliable [1].

Interactive communication channels such as SEO, WOM and other forms of digital marketing allow Internet users to gather a great deal of information about what they are looking for on the Internet, enabling them to decide to buy [3].

Consumers who buy online have become more familiar with digital tools, and the use of information on social networks has also become a crucial benchmark in the online purchasing process [2].

Digital marketing has a considerable influence on Internet users' purchasing behavior and attitude. Whether it's on social networks via content marketing or via paid advertising, the choice and flexibility of products offered to consumers by digital marketing has changed the way businesses operate. Today's consumers are more demanding than ever, because of the awareness that has developed over time and with the advent of digital marketing [1].

On the other hand, customer acquisition and sales have been studied by many researchers, businesses that want to build a well-known brand and a solid company in the market will need to integrate digital marketing to achieve significant results. In addition, digital marketing includes various strategies that companies can include in their global marketing vision to get new clients. SMM (social media marketing) is one of the most utilized strategies for interacting with customers and building a trustworthy relationship that can lead to a long-term business relationship [4].

SMM is the most popular marketing method for acquiring new customers, the key to this strategy lies in developing a targeted audience interested in the products or services offered by the brand. It's important to point out that this strategy requires you to be very active on the various social networks, regularly publishing engaging and creative visuals and videos, which will stimulate interest in the various products offered by the company. In addition, several researchers have emphasized the importance of publishing customer testimonials and reviews and its impact on customer acquisition [5].

The aim of this study is to investigate the impact of digital marketing on customer acquisition, the adoption of new technologies enables companies to present their product or service in a more creative way and attract more customers. Which leads us to point out the crucial role of digital marketing in today's age.

3 Research methodology

To initiate this study, a systematic analysis was carried out using the PRISMA method. This involved collecting references from databases such as Scopus, Science Direct and Web of Science. A systematic literature review is based initially on the definition of the keywords to be used in the search for references on the above-mentioned databases, which will give us a clearer overall view of the studies that have been carried out on the subject of our research. On the other hand, the systematic literature review is intended to identify gaps and future avenues of research [6].

Indeed, this method aims to classify the references of studies found on databases and then analyze and evaluate them to answer our research question and also provide a new avenue of research for other researchers. The steps performed to conduct this study are shown in Figure 1, which consists of finding references, removing duplicates, and selecting studies according to the most appropriate inclusion and exclusion criteria [6].

The PRISMA flowchart is presented in Figure 1 as the following: identify studies that have been conducted on the field of research determined by using different keywords on different databases (systematic review); removing duplicates from the studies collected; reading the title and the abstract and selection of the most relevant studies; selecting of studies after reading the full text; include the last studies that will be subject to a more detailed analysis to answer the research question [7].

To follow these steps and carry out our study, we proceeded to query several databases including Scopus, Science Direct, and Web of science to identify the references with which we will begin our work and export them to Zotero.

We used the keywords as follows for searching on Scopus database: "influence" OR "effect" OR "impact" AND "online advertising" OR "content marketing" OR "SEO" OR "ad*" OR "inbound marketing" OR "outbound marketing" OR "social media" OR "marketing" OR "digital marketing" AND "customer acquisition" OR "lead generation" OR "salespeople" OR "sales agent" OR "commercial agent*" OR "customer acquisition specialists" OR "potential clients" OR "potential customers" OR "potential buyers" OR "future customers" OR "qualified prospects" OR "client outreach" OR "Business development" OR "Sales prospecting".

The search parameters used are unique from a database to another, because the search engine on each database works differently.

Table 1. Research formula on each date base

Database	*Research formula*
Scopus	*("influence" OR "impact" OR "effect" AND "mobile marketing" OR "affiliate marketing" OR "video marketing" OR "podcast marketing" OR "web traffic" OR "web marketing" OR "PPC" OR "email marketing " OR "influencer marketing" OR "online advertising" OR "online marketing" OR "content marketing" OR "SEO" OR "ad*" OR "ads" OR "social media" OR "digital marketing" OR "SEM" OR "SMM") AND ("customer acquisition" OR "acquisition of customers")*
Science Direct	*("influence" OR "impact" OR "effect" AND "content marketing" OR "advertising" OR "web marketing" OR "social media" OR "digital marketing") AND ("customer acquisition")*
Web of science	*ALL=(("influence"OR"impact" OR "effect" AND "mobile marketing" OR "affiliate marketing" OR "video marketing" OR "podcast marketing" OR "web traffic" OR "web marketing" OR "PPC" OR "email marketing " OR "influencer marketing" OR "online advertising" OR "online marketing" OR "content marketing" OR "SEO" OR "ad" OR "ads" OR "social media" OR "digital marketing" OR "SEM" OR "SMM") AND ("customer acquisition" OR "acquisition of customers"))*

As mentioned above, we searched several databases to identify scientific studies related to our research topic, using the keywords mentioned above. The scientific studies identified are mainly found in Scopus, Science direct and Web of Science, with a total of 263 articles identified. After working through the various articles, a total of 12 articles were included, applying the inclusion and exclusion criteria shown in Table 2 below.

Table 2. Inclusion and exclusion criteria

Inclusion criteria	*Exclusion criteria*
Studies on digital marketing and customer acquisition or sales	*1-Only Articles or reviews* *2-Duplicates* *3-Published Outside the period between 2015 and 2024* *4-Languages other than English or French articles*

In order to conduct our systematic review, we applied the above-mentioned criteria. The articles that excluded were mainly those written in a language other than French and English, published outside the period from 2015 to 2024, and articles other than reviews and research articles.

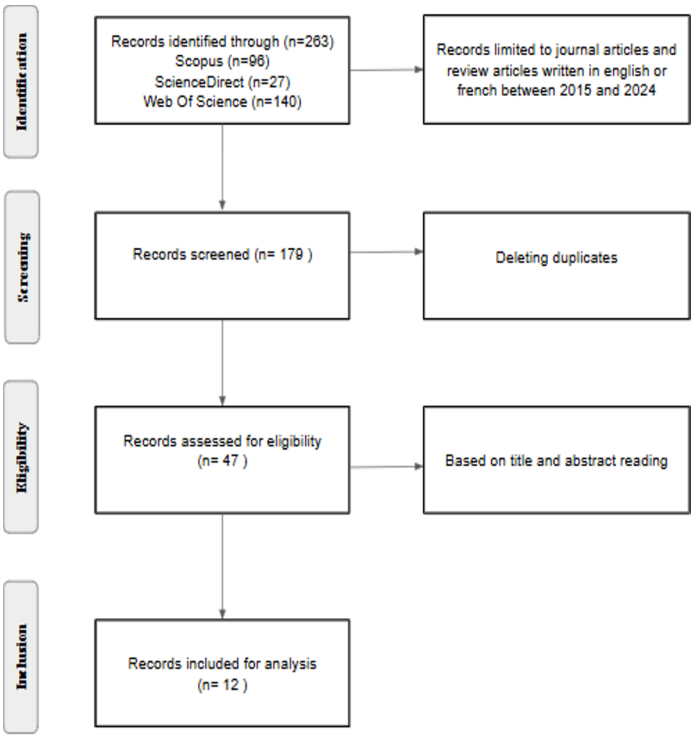

Figure 1. PRISMA process for selecting documents

Table 3 below summarizes the number of articles selected by database. At the start of our research, we searched three databases, namely Scopus, science direct and web of science. The search on these three databases enabled us to select a total of 263 articles,

i.e. 96 articles from the Scopus database, 27 articles from science direct and 140 scientific articles from web of science. In fact, for Scopus we excluded 89 articles according to the exclusion criteria indicated in Table 2 above, and 7 articles were selected for the qualitative analysis. For science direct, 24 articles were excluded in the same way and 3 were selected. Finally, for web of science 138 articles were excluded and 2 selected.

Table 3. Records per database

Database	Identified records	Excluded records	Included records
Scopus	96	89	7
Science Direct	27	24	3
Web Of science	140	138	2
Total	263	251	12

4 Results

We now proceed to analyze the selected articles to address our research question more effectively. Excel will be used to conduct our qualitative analysis for all the 12 articles that we selected. Our research base is based on three databases as mentioned above, namely Scopus, science direct and web of science (table 4). The articles selected for our qualitative analysis mainly come from the Scopus database, with a total of 7 articles selected, i.e. 58% of the total number of articles selected. Then, for science direct, 3 articles were selected, representing a percentage of 25% of the 12 articles selected. As for web of science, only 2 articles were retained, with a percentage of 17%, the lowest of the 3 databases used in our research.

Table 4. Records et percentage of article per data base

Database	Included records	Percentage
Scopus	7	58%
Science Direct	3	25%
Web Of science	2	17%
Total	12	100%

You will find below the chart 1 showing the distribution of selected references by year of publication, we can notice that the publication of articles that are interested in our research topic has seen an increase in 2022. This shows that the subject is beginning to attract the interest of researchers.

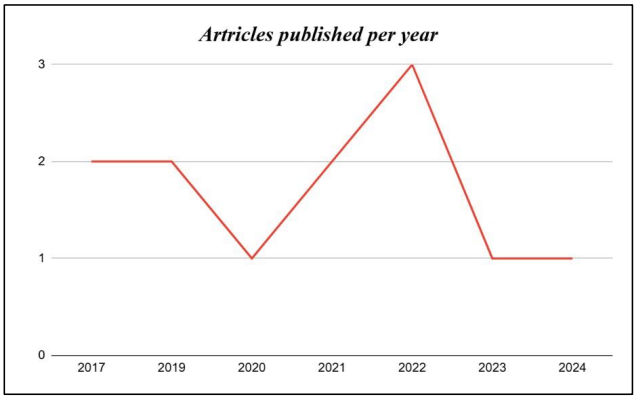

Chart 1. Records published per year

The keyword cloud below shows the most repeated keywords in our selected articles, it shows three categories of keywords highlighted with three different colors with orange represents the keywords with the highest frequency such as marketing, media, customer acquisition, social data and the black color represents keywords with medium frequency for example performance, sales, selling, and the grey colors gives us the lowest frequency keywords.

Figure 2. Records published per year, source: Nvivo

The table below summarizes the top 10 most frequent keywords in the selected articles. Based on the ranking and the number of times each keyword is repeated, we see that the words social and media are the most frequent, followed by the keywords customer, marketing and acquisition. This shows the focus of our articles on the subject of digital marketing and customer acquisition.

Table 5. Top 10 Keywords ranking, source: Nvivo

Word	Length	Count	Weighted Percentage (%)
social	6	1311	1,57
media	5	1135	1,36
customer	8	933	1,11
marketing	9	651	0,78
acquisition	11	468	0,56
data	4	450	0,54
mobile	6	423	0,51
customers	9	413	0,49
research	8	380	0,45
information	11	362	0,43

The analysis of our selected studies has enabled us to highlight the journals with the highest number of publications. This step consists in giving a clearer visibility to the journals most interested in our research topic. The table below summarizes the number of publications by journal, noting that the industrial marketing journal is the most popular for publications in this field with 2 publications in our case.

Table 6. Records published per review

Review	Number of publications
Journal Decision Support Systems	**1**
Journal Marketing Science	**1**
Journal Internet Research	**1**
Journal Industrial Marketing Management	**2**
Journal of Advertising	**1**
Journal of Services Marketing	**1**
Journal Digital Business	**1**
Journal of Personal Selling & Sales Management	**1**
Journal of Retailing and Consumer Services	**1**
Journal of Economic Affairs (New Delhi)	**1**
International Journal of Engineering, Transactions A: Basics	**1**

The distribution of references by country where the research was carried out is very important to give an idea of which countries are most interested in this type of subject for future scientific research. In our research, we find that the United States is the most interested in this research topic with a number of 3 published studies, followed by China and Germany with 2 publications.

Table 7. Distribution by country

Country	Number of studies
Belgium	1
USA	3
China	2
Italy	1
Germany	2
Ghana	1
Ukraine	1
Total	12

We analyzed the 12 articles selected to see what research methodologies were adopted in each study. We found that 9 studies used quantitative methods on specific markets which represents 75% from the 12 studies selected while for qualitative methods and literature reviews we found 2 and 1 studies respectively.

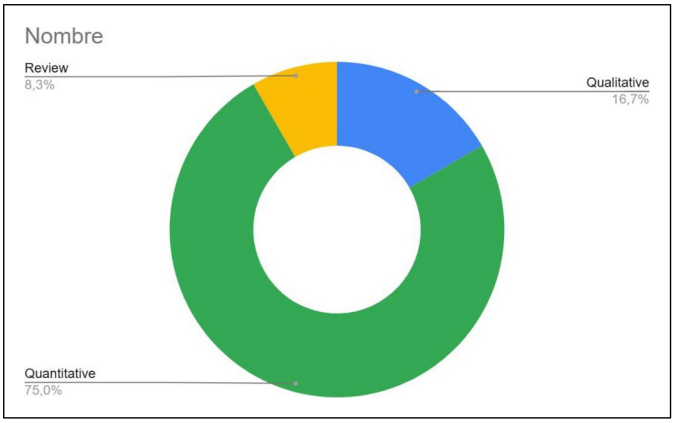

Figure 3. Type of research

Table 8. Thematic analysis

Title	***Author***	***results***
Advancing social media driven sales research: Establishing conceptual foundations for B-to-B social selling	(Ancillai et al.,2019)	*This study was conducted by combining a systematic review and an empirical study to conceptualize social selling, the author specifies that this concept focuses on building an engaging relationship on social networks in the first place and then drive sales in a smooth way.*
Social media in B2B sales: Why and when does salesperson social media usage affect salesperson performance?	(Bowen et al.,2021)	*According to the results of this study, organization should encourage salespeople to use social media in their day to day selling activities to get better performance and enhance customer acquisition results.*

Achieving mobile social media popularity to enhance customer acquisition: Cases from P2P lending firms	(Du et al.,2019)	*Based on SET (social exchange theory) and HSM (heuristic system model), the relationship between mobile social media popularity and customer acquisition in the context of P2P lending firms is confirmed.*
A Model for Analysis of Social Media in Adoption of Mobile Banking	(Hamidi and Mohammadi,2024)	*The main focus of this article is to study the impact of social media on customers usage of mobile banking. The study tested various hypothesis to see the relationship between social media performance and mobile banking, and results state that banks can utilize social media to engage with their customers and encourage*
Effect of interactive marketing channels on service customer acquisition	(Majid,2023)	*This study was conducted in two different sectors to see the impact of interactive marketing on customer acquisition. The first study focuses on a home improvement marketplace and the second study focuses on the real estate sector. The result confirms the main hypothesis which postulates that the acquisition rate of customers exposed to interactive marketing is higher than those exposed to marketing that is not interactive.*
The added value of social media data in B2B customer acquisition systems: A	(Meire et al.,2017)	*This study contributes through the analysis of the use of social networks in B2B, more*

real-life experiment		*precisely by adopting a data-based approach on social media which will allow the identification of the best prospects in B2B and improve customer acquisition.*
Digital Marketing and its Role in Customer Acquisition	(Melinevskyi et al.,2023)	*Various digital marketing strategies influences customer acquisition according to this study, the author specify that SEO,RTB,SMO, and SEM are the most strategies to drive sales.*
The impact of salespeople's social media adoption on customer acquisition performance – a contextual perspective	(Schendzielarz et al.,2022)	*In this study the author examines the impact of the use of social networks by salespeople on customer acquisition, the empirical study carried out by the author showed that adoption of social media impacts customer acquisition if this communication is personalized according to the target audience, which means that the results of social media adoption is related with the personalization effort done by salespeople.*
Customer acquisition via display advertising using multi-armed bandit experiments	(Schwartz et al.,2017)	*Display advertising is very effective to enhance customer acquisition when adopting MAB approach, which consists of optimizing display campaigns in the testing phase using machine learning and dynamic optimization.*
Exploring social media affordance in relationship marketing practices in SMEs	(Sedalo et al.,2020)	*The study focuses on the use of social networks in small and medium-sized*

		enterprises, adopting a case study the author conducted his study to arrive at a result indicating that social media affordances such as brand visibility, sharing, and the relational aspect on social media influences customer acquisition.
The Impact of User-Generated Content and Traditional Media on Customer Acquisition and Retention	(You and Joshi,2020)	*The study was conducted in two different sectors, the automative sector and the mobile gaming sector, with the aim of studying the impact of UGC and traditional media on customer acquisition and retention. The result of this study shows that UGC impacts customer acquisition while customer retention is more influenced by traditional media.*
How customer engagement in the live-streaming affects purchase intention and customer acquisition, E-tailer's perspective	*(Zheng et al.,2022)*	*This study showed that customer engagement in live streaming for online ecommerce marketplace affect customer acquisition, more specifically the author mentioned visits and comments are the most that drive sales.*

5 Discussion

Based on our qualitative analysis of the articles selected using the Prisma method, the topic of the impact of digital marketing on customer acquisition was researched from different perspectives. That said, the selected scientific articles address our topic both directly and indirectly, meaning that several studies examine the impact of a specific digital marketing strategy on sales, customer acquisition, or on salespeople. The results of the studies selected in the table above show that each author studied the topic in a different context and from different perspectives, with valuable empirical studies. Throughout this literature review, we analyzed the studies conducted on our research topic with the aim of answering our initial question: "Does digital marketing impact customer acquisition?"

Looking at the study conducted by [8] he concluded that the use of social networks banks could acquire more customers, also because of the competition in the banking sector and the need of adoption of social media marketing could help banks penetrate new markets to introduce their products and services. Also, monitoring information and data on social networks banks can analyze customer reactions in order to optimize their strategy and increase customer acquisition and also a tool to differentiate themselves from the increased competition in this sector.

On the other hand, [4] studied the topic from another angle focusing on the popularity of social media and how it influences customer acquisition based on tow theoretical blocs SET (social exchange theory) and HSM (heuristic system model), which indicates that the relationship between heuristic cues (soured credibility and content freshness) and systematic cue (transaction relevance) affect social media popularity and then customer acquisition.

According to [2], the use of social networks and content marketing impacts purchasing behavior in BtoB the author proceeded with a different study by combining a systematic review and an empirical study to conceptualize the sale using social networks, he specifies in his study that the adoption of social networks is not another channel to generate sales only but a way to engage, inform customers using social networks in their purchasing decisions. In the same track,[9] emphasizes the influence of the use of social networks by sales agents on sales performance. The study concluded that the use of social networks by sales agents positively influences customer acquisition and sales, sales agents must be able to use social networks in an effective way and offer service, also note that the entire sales team must use social networks for optimal results and not a certain number of them.

The other study by [10] also shows that the use of social media is a crucial lever for commercial performance and the acquisition of new customers, but on condition that communication via its digital channels is personalized to have a satisfactory result.

On the other hand, several studies have focused on other digital marketing strategies for example [3] in his study which focuses on the impact of interactive marketing channels on acquisition in service companies, concluded that interactive communication channels allow customers to identify the most suitable companies with their needs, and therefore impacting customer acquisition.

A research angle is different from what was said, [5] explored how the use of social networks and big data and its impact on the sales process, the author according to his study which focused on a real case of the Coca-Cola company concluded that the sales process in B2B can be enhanced by utilizing data in social media which helps to identify good prospects.

[1] in his study on digital marketing and customer acquisition found that different digital marketing strategies, including SEO, RTB (real-time bidding), SMO and SEM, significantly impact customer acquisition. Digital marketing is one of the most adopted strategies for acquiring new customers.

After discussing all the studies exploring customer acquisition from the marketing perspective on networks, [11] studies customer acquisition from a completely more in-depth and precise angle. His study focuses on a digital marketing strategy widely used today, display advertising, by studying how to optimize A/B testing with a more innovative approach using machine learning called MAB (multi- armed bandit). This strategy consists of finding what percentage of impression to allocate for which advertisement, the study concluded that customer acquisition can be more efficient when adopting a dynamic optimization of ads using MAB.

In a study conducted by [12] about social media affordance in SEMes in the context of

relationship marketing, the author found that the adoption of social media in their activity results in affordances (brand visibility, sharing, relationship), thus customer acquisition is also impacted positively. On the other hand [13] emphasized the impact of UGC on customer acquisition, he concluded from the study that they conducted that customer acquisition is positively impacted by UGC more than by traditional advertising.

Focused on another digital marketing strategy, [14] they show the relationship between customer engagement in live streaming and purchase intention on the one hand and customer acquisition on the other hand. They found that visits and comments in a live streaming have a positive impact on customer acquisition.

6 Conclusion

Today, competition has become more intense than ever, and businesses are constantly striving to improve their results and performance. Digital Marketing is a crucial lever for any company wishing to expand its customer base and acquire more customers at a more attractive cost. Various digital marketing strategies are now preferred by businesses to engage and communicate with customers. Social media marketing is among the most popular strategies for creating a valuable relationship with customers [1].

As a result, customer acquisition has become a focus for every company with the emergence of digital marketing and new technology. Developing new customers has become possible only with digital marketing to achieve satisfactory and optimal results [1].

The objective of our study was to present the impact of digital marketing on customer acquisition through the analysis of scientific studies previously conducted on this topic, using a systematic review using the PRISMA method. We were able to select a total of 12 articles that directly or indirectly studied our research topic. Our work was based on the use of several inclusion and exclusion criteria to identify the best scientific articles on which to base our study.

After analyzing the selected studies and following the analysis of these articles, the researchers each developed their own perspective on the topic studied. Several researchers focused on social media marketing and its impact on customer acquisition, while others focused on more specific digital marketing strategies. In the end, the result we concluded is that digital marketing has a positive impact on customer acquisition and sales for companies, whether we adopt social media marketing, UGC, or even live streaming. Each strategy has its own particularities, but the common result is the improvement of organizations sales and the increase in the customer base.

Our study concluded a very interesting result: digital marketing remains a powerful and effective strategy for improving sales and customer acquisition for companies and organizations. As well explained and observed through our descriptive analysis and thematic analysis of this systematic literature review, marketing on social media is a dominant strategy when it comes to customer acquisition with the lowest possible cost, user-generated content is also proven to be effective in attracting more customers by creating organic content and with a very low cost compared to paid advertising on social media, and this too has a higher conversion rate. Today's digital marketers could benefit from adopting similar strategies to attract more customers and increase sales, as social network marketing is a strategy that has proven its results in the past.

Our study focused on the impact of digital marketing on customer acquisition, analyzing a limited number of articles in French and English and only three solicited databases, which represents a limitation to our study. We could measure the impact of digital

marketing by analyzing a well-defined and specific strategy on customer acquisition to have a more pointed and specific angle of study, the emergence of artificial intelligence could also be interesting, in the sense that the use of artificial intelligence tools in marketing and its impact on customer acquisition. On the other hand, the limited number of studies retained is also a limitation that could be improved by broadening the search databases and using other keywords to identify a more interesting number of studies.
